I'm definitely not the first to mention this, but I did want to get my say in about Apple's wicked cool 8 core MacPro desktop. At 4000 USD that is a lot of processing power for not much change. At some point I will have to buy a new system and although right now I am looking at the quad core (2.00 Mhz), if I can swing it, it would be NICE to get the 8 core.

Will keep everyone posted... (MUCH later: Got a 3.0 Mhz 8 core - it is sweet)
