I use Kubuntu (KDE version of Ubuntu) quite a bit. Since I run it under VMWare on my Mac Pro, I have had occasions when booting the virtual machine it does not see my network interface.

This is very irritating.

To fix this, do the following: `sudo nano /etc/network/interfaces`  
This is what I use for my network: `auto eth0`  
`iface eth0 inet dhcp`

Close the file and you are (hopefully) done. Now reboot the virtual machine.
